ABRC Stock Number CS835414; T-DNA left border flanking sequences of
Syngenta Arabidopsis Insertion Library (SAIL) lines are available
through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not
single contiguous sequences.

Clones are derived from the INRA bovine BAC library
(http://locus.jouy.inra.fr/fpc/cattle bac map.htm). For BAC library
availability, please contact Andre Eggen (eggen@jouy.inra.fr). This
work was undertaken as part of the International Bovine BAC
(Evry) Plates 597 row: D column: 12
Seq primer: M13 Reverse
Class: BAC ends.

/note="Organ: brain; Vector: pOTB7; Site l: Xhol; Site_2:
EccRI; cDNA made by oligo-dr priming. Directionally
cloned into EccRI/Xhol sites using the following 5'
adaptor: GGCACGAG(G). Size-selected >500bp for average
insert size 1.8kb. Library constructed by Ling Hong in
the laboratory of Gerald M. Rubin (University of
California, Berkeley) using ZAP-cDNA synthesis kit
(Stratagene) and Superscript II RT (Life Technologies).

This is the 5' sequence of the clone insert Clone from S. Wiemann,
Molecular Genome Analysis, German Cancer Research Center (DKPZ);
Email s.wiemann@dkfz.heidelberg.de; sequenced by EMBL (European
Molecular Biology Laboratories, Heidelberg/Germany) within the cDNA
sequencing consortium of the German Genome Project. This clone
(DKP2045942113) is available at the RZPD in Berlin. Please contact
the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
Berlin-Charlottenburg, GERWANY; Email: clone@rzpd.de Further
information about the clone and the sequencing project is available
at http://mips.gsf.de/projects/cdna/.

//note="Weetor: pAMP1; Construction of the cDNA library was performed by Dr. W. Gregg Clark using a modification of the cDNA synthesis protocol developed in the laboratory of Dr. Wichael Lovett by Dr. Yulia Korshunova (personal communication). First polyA + RNA was isolated from total gametophore RNA using oligo dT magnetic beads. Following this, first strand cDNA synthesis was performed on the baad-bound polyA + RNA, during which an oligonucleotide anchor sequence was incorporated onto the 5'-ends of the cDNA. PCR amplification was then used to synthesize the second strand, to amplify the double stranded DNA, and to incorporate dTP containing sequences into the ends of the double stranded cDNA. This DNA was size selected and cloned into pAMP1 using the CloneApp pAMP1 System (Life Technologies, Gibcosku) for cloning amplification products by a non-restriction site dependant process. The cloning was directional based on sequence asymmetry introduced at the ends during PCR amplification. The amplification. The sammealing mixture was transformed into chemically competent DHAS calls and selected for ampicially resistant growth. The resulting clones (about ampicially resistant growth. The resulting clones (about

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       /note=Tvector: lambda in included the light is sal; Site 2: Not; Lambda PRL2 is a cDNA library derived from equal quantities of 4 pools of mnNA. The mRNA sources were 1) 7 day germinated etiolated seedlings; 2) tissue culture grown roots; 3) staged plants half with 24 hour light cycle, half on 16 hr light, 8 hour dark-rosettes; 4) same plants as 3 but aerial tissue (stems, flowers and slingues. The vector is BRL's lambda Zip-Lox. The cDNA lingues. The vector is BRL's lambda Zip-Lox. The cDNA lingues.

Zorn.

CDNA was oligo dT primed from Sug of poly A+ RNA from egg.

CDNA was oligo dT primed from Sug of poly A+ RNA from egg.

ECORI-NOLI cut cDNA was then ligated into pCS107 with ECORI at the 3' end.

Year at the 3' end.

Vector: pCS107; Site 1: ECORI; Site 2: NotI

Host: Escherichia coli XL1-blue.

Novel compound for diagnosing, preventing and treating immune disorders, comprising an oligonucleotide that specifically hybridizes with a nucleic acid sequence encoding B7 protein.
                                                                                                                                The present invention provides sequences of antisense oligonucleotides targeted at the murine and human B7-1 and B7-2 coding and mRNA sequences. The antisense sequences have phosphorothicate backbones and some nucleotides are 2'-methoxyethoxy residues. The sequences can be used in the treatment of inflammatory and autoimmune disorders, including asthma, juvenile diabetes mellitus, myasthenia gravis, Graves' disease, rheumatoid arthritis, allograft rejection, inflammatory bowel disease, multiple sclerosis, psoriasis, systemic lupus erythematosus, contact dermatitis, rhinitis, allergies and cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88; human; B7-2; inflammatory skin disorder; antisense; psoriasis; contact dermatitis; atopic dermatitis; seborrheic dermatitis; nummular dermatitis; generalised exfoliative dermatitis; eczema;

The invention also relates to a method of inhibiting expression of a nucleic acid molecule encoding B7-1 or B7-2. The antisense compound is an antisense oligonucleotide which has a modified sugar moiety and nucleobase. The human B7 protein is human B7-1 or B7-2 protein or both. The compound is useful for treating airway hyperresponativeness or pulmonary inflammation, which is associated with asthma, by inhibiting expression of human B7 protein. This sequence represents an antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating airway hyperresponsiveness or pulmonary inflammation comprises administering an antisense compound targeted to a nucleic acid molecule encoding a human B7 protein to the individual.
disorder in an individual by topically applying an antisense compound targeted to a nucleic acid molecule encoding a human B7 protein. The invention is for treating an inflammatory skin disorder in individual. The skin disorder is psoriasis, contact dermatitis, atopic dermatitis, seborrheic dermatitis, nummular dermatitis, generalised exfoliative dermatitis or eczema. The invention effectively modulates critical costimulatory molecules such as the B7 protein. The present sequence represents a human B7-2 targeted oligonucleotide.

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. An ORF has been identified within the sequence. The 5' ESTs were prepared from total human RNAs or poly4* RNAs derived from 30 different tissues. ESTs sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensit, gene therapy and chromosome mapping procedures. They are used to obtain
                                                                                      Human, S' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.

A cDNA clone (AAT49181), designated clone 29, codes for the B-lymphocyte antigen B7-2 (AAW08467), a CTLA4/CD28 ligand which costimulates T cell activation. It was obtd. by transfecting COS cells with a human anti-IgM activated B cell cDNA library, reacting transfectants with CTLA41g and CD281g, and panning with anti-human IgG antibody. E. coli transfected with a vector contg. the CDNA insert of clone 29 was deposited as ATCC 69357. Nucleic acids encoding the extracellular domain, variable region-like domain or constant region-like domain of B7-2 (see also AAT49197-98) are used to construct novel fusion proteins with e.g. an immunoglobulin constant region. These can be expressed in host cells and used to enhance or suppress I cell-mediated immune responses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  B7-2 antigen; mammalian tumour cell; T cell costimulation; CD28 ligand; CTLA4 ligand; therapy; T-cell response; human; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA encoding a B7-2 fusion protein - used to enhance or down regulate 1_{ymphocyte} antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100.0%; Score 20; DB 2; Length 1120; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the human anti-1gM activated in the pCDM8 vector using poly A+ RNA from the human anti-1gM activated B cells. Four clones were strongly positivie for B7-2 expression by indirect immunofluorescence using CTLA41g and flow cytometric analysis. The B7-2 cDNA insert in Clone 29 was sequenced in the pCDM8 expression vector employing the following strategy. Initial sequencing was performed using sequencing primers T7 (AAQ81352), CDM8R (AAQ81353) (Invitrogen) homologous to pCDM8 vector sequences adjacent to the clone B7-2 cDNA. Sequencing was performed using dye terminator. Cc these primers was used to design additional sequence obtd. using cheen sprimers was used to design additional sequence obtd. using primers was used to design additional sequence of additional primers was continued until the B7-2 cDNA was completely sequenced on primers was continued until the B7-2 cDNA was completely sequenced on primers was continued until the B7-2 cDNA sequence is given in AAQ81351. The predicted protein sequence (AAR67984) exhibits many features common to other type 1 Ig superfamily membrane proteins. Following cleavage of the signal peptide the resulting membrane-bound protein would have an unmodified mol. Wt. of approx. 34 kba. The extracellular domain contains eight potential N-linked glycosylation sites. E. coli transfected with a vector contg. the cDNA insert of clone 29 was deposited under ATCC 69357
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CTLA4; CD28; ligand; B7-2; B lymphocyte antigen; B-cell; costimulation; immunoglobulin; antibody; autoimmune disease; allergy; tumour; vaccine; graft versus host disease; T-cell; T lymphocyte; TH2 response; immunosuppressive; immunostimulant; therapy; ss.

The invention relates to an isolated nucleic acid molecule encoding a furst fusion protein comprising a first nucleotide sequence encoding a second peptide. The geptide, and a second nucleotide sequence encoding a second peptide. The first nucleotide sequence hybridizes in 6 % sodium chloride/sodium c itzate (SSC) at 45 deg. C, followed by a wash in 0.2 % SSC at 50 deg. C co a portion of a nucleotide sequence which encodes a human or murine B lymphocyte antigen (B7-2) extracellular domain. The first peptide has the collisty to bind CD28 or CTLA4. The first peptide has an amino acid a sequence that is identical var at least 50% identical with the extracellular domain of a human B7-2 peptide (AB37085). The second peptide is especially an immunoglobulin constant region. This sequence competence that is used as a first sequence in the construct of the corresponding the human B lymphocyte antigen B7-2 (BB7-2 clone 29) and is used as a first sequence in the construct of the invention. The nucleic acid molecules are useful in various expression vectors to direct synthesis of the corresponding proteins or peptides in a variety of hosts, particularly eukaryotic cells, e.g. mammalian or cinsect cell culture. The nucleic acids are also useful for enhancing the immunogenicity of a mammalian cell, e.g. tumour cell (sarcoma) or an entigen presenting cell (macrophage). The fusion proteins or peptides constinged to the corresponding proteins or peptides are using not in situations of tissue, skin or organ transplantation, or in graft-corresponding to the proteins are also useful for enhancing the constinct of parthogens and may also he constinct and analyses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    efficacy of vaccination against a variety of pathogens, and may also be used to upregulate an immune response against a particular pathogen
                                         Nucleic acids and fusion proteins of CTLA4/CD28 ligands, useful for enhancing or suppressing T cell-mediated immune responses, especially during tissue, skin or organ transplantation, or in graft-versus-host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         B7 protein, B7-2; CD86; CD28 ligand; T cell; T cell proliferation; infectious disease; cancer; immunotherapy; immunotherapy; gene; 88.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence encodes the human B7-2 antigen, which can be used in the method of the invention. The method is for transfecting an isolated mammalian tumour cell with an exogenous nucleic acid molecule encoding a mammalian B7-2 molecule, where the B7-2 molecule is expressed in the tumour cell is capable of costimulating a T cell and is capable of binding a CD28 or CTLA4 ligand. The method is useful for treating tumours by stimulating a T-cell response against tumour cells in vivo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Immunomodulator; fusion protein; human; murine; mouse; lymphocyte; CD28; antigen; extracellular domain; CTLA4; immunoglobulin constant region; immunogenicity; tumour; sarcoma; antigen presenting cell; macrophage; T cell-mediated immune response; transplantation; vaccination; se.

The present sequence are ligands for CD28. Activated T cells are contacted with a stimulatory form of a natural ligand for CD28, such as a B7 with a stimulatory form of a natural ligand for CD28, such as a B7 costimulation. B7 molecules are used in the method of the invention. The specification describes method for inducing a population of T cells to proliferate. The method involves activating population of T cells to proliferation of accessory molecule (e.g. CD28) on T cell surface with a ligand (e.g. B7 protein) which binds the molecule, to induce proliferation of T cells, monitoring proliferation of T cells in response to continuing exposure to the ligand, and reactivating and restimulating T cells when rate of proliferation has decreased to induce further proliferation of the cells. The method is useful for inducing proliferation of T cells, for use in treatment of infectious disease, proliferation of T cells in numbers sufficient to reconstitute an oppulation of T cells in numbers sufficient to reconstitute an individuals's total CD4+ or CD8+ T cell population. The resulting T cell
                                                                                                                                                                                                                                                                                                                                                                                                                   Inducing a population of T cells to proliferate, by activating population of T cells and stimulating an accessory molecule on the surface of the T cells with a ligand which binds the accessory molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                population can be genetically transduced and used for immunotherapy or can be used in methods of in vitro analyses of infectious agents. A population of tummun-infiltrating lymphocytes can be obtained from an individual afflicted with can the T cells stimulated to proliferate to sufficient numbers. The resulting T cell population can be genetically transduced to express tumour necrosis factor (TNF) or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present sequence encodes a member of the B7 family of protein, B7-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 factor and restored to the individual. CD4+ T cells expanded by this method are useful in the treatment of HIV infection in an individual

                  4DK69859,
                                   Treating HIV infection in individual by isolating T cells from leukocytes, contacting T cells with anti-CD3 antibody for T cell proliferation, separating antibody from T cells, monitoring proliferation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a novel method of treating human immunodeficiency virus (HIV) infection in an individual. The method involves isolating population of CD4 T cells from leukocytes, contacting population of CD4+ T cells with an anti-CD3 antibody for stimulating T cell proliferation, separating antibody from T cells, monitoring proliferation of T cells, restimulating T cells with antibody and restoring T cells to individual. The present sequence is human CD28 ligand, B7 cDNA. This sequence is used to illustrate the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method for expanding a population of T cells to about 100-10000-fold over the original T cell population, or to about 10 log 1 to 12 log 1 2. The method comprises stimulating a CD28-associated signal on the surface of the T cells with agent comprising anti-CD28 antibody, B7-1 or B7-2. The method is useful for inducing a population of T cells (e.g. CD4+, CD28+, CD28RA+ or CD28RA+ comprising a renewable source of CD4+ T cells. The expanded T cell population can be upenetically transduced, and used for immunotherapy to treat a variety of human diseases (e.g. infectious diseases or cancer), or used in diagnostic protocols. T cells were obtained from leukopheresis of a normal donor, and purified with FICOLL density gradient centrified with FICOLL density gradient centrified
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             human B7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       followed by magnetic immunobead sorting. The present sequence is human -2 cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Expanding T cell populations, useful for preparing renewable sources cells (e.g. CD4+) for immunotherapy or diagnostics, by stimulating a -associated signal on the surface of the cells with an anti-CD28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ô

                          The invention relates to a method for inducing a population of T cells to proliferate. The method comprising activating a population of T cells, and stimulating an accessory molecule on the surface of the T cells with a ligand that binds the accessory molecule. The invention is useful for immunotherapy, for treating HIV infection, cancer or infectious disease, or in diagnostic applications. The present sequence is human B7-2 cDNA.
                                                                                     T cell; ss; immunotherapy; therapy; HIV infection; cancer; infectious disease; cytostatic; antimicrobial; gene; human; chromosome 3.
                                                                                                                                                                                                                                                                                                                                                                                                                    Inducing a population of T cells to proliferate, for immunotherapy or treating HIV infection, cancer or infectious disease, comprises activating a population of T cells and stimulating an accessory molecule on the surface of the T cells.

The invention also relates to a method of inhibiting a human expression of a nucleic acid molecule encoding B7-1 or B7-2. The antisense compound is an antisense oligonucleotide which has a moified sugar moiety and nucleobase. The human B7 protein is human B7-1 or B7-2 protein or both. The compound is useful for treating airway propersionsiveness or pulmonary inflammantion, which is associated with asthma, by inhibiting expression of human B7 protein. This sequence represents DNA encoding a human B7-2 polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating airway hyperresponsiveness or pulmonary inflammation comprises administering an antisense compound targeted to a nucleic acid molecule encoding a human B7 protein to the individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             100.0%; Score 20; DB 12; Length 2781; 100.0%; Pred. The invention relates to a method for treating airway hyperresponsiveness or pulmonary inflammation in an individual comprising administering an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antisense compound targeted to a nucleic acid molecule encoding a human B7 protein. The invention also relates to a method of inhibiting supression of a nucleic acid molecule encoding B7-1 or B7-2. The antisense compound is an antisense oligonuclectide which has a modified sugar moiety and nucleobase. The human B7 protein is human B7-1 or B7-2 protein or both. The compound is useful for treating airway hyperresponsiveness or pulmonary inflammation, which is associated with asthma, by inhibiting expression of human B7 protein. This sequence represents human B7-2 genomic DNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating airway hyperresponsiveness or pulmonary inflammation comprises administering an antisense compound targeted to a nucleic acid molecule encoding a human B7 protein to the individual.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 68001 BP; 20352 A; 13494 C; 14117 G; 20038 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lupus, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a mRNA reference sequence for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.

```
The present sequence is one of a large number of 5' EST8 derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' EST8 were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; reproductive system related antigen; reproductive system disorder;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up convarientiated in transgenic plants overexpressing the heterodimeric EZFa/DFa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, carymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or biomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, biochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers using transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as BNA replication, cells transcription factors. This polymucleotide sequence is thale cross cDNA transcription factors. This polymucleotide sequence is thale cross cDNA transcription factors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

```

```
Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the protein and coding sequences of number of human reproductive system related antigens. These can be in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a coding sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 1; SEQ ID NO 1063; 1297pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SM

The present invention relates to novel murine cDNAs produced using gene trap technology. The OMNIBANK gene trapped sequences (GTSs) are individually identified novel genes, and are useful in functional genomic analysis, in the discovery and development of new therapeutic and disgnostic agents, for gene discovery, for diagnostic gene expression analysis, for cross species hybridisation analysis, and for genetic manipulations such as antisense inhibition or gene targeting. The polymucleotides of the invention are also useful for isolating cDNAs, genomic clones or full-length genes/polymucleotides, or their homologues, cherologues, paralogues or orthologues, that are capable of hybridising to one or more of the new murine polymucleotide sequences. The polymucleotides are also useful for identifying the coding regions of the murine genome, and as hybridisation probes. ABX30657.ABX31862 represent the murine GTSs of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site at
                                                                                                                                                                                                                        New murine polynucleotides comprising gene trapped sequences, useful in functional genomic analysis, in the development of new therapeutic or diagnostic agents, for diagnostic gene expression analysis or for genetic manipulations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, CAK1 antigen 9.46; antigen, malignant tumour; inflammation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of 973 human testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a cDNA of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of bioactive agent capable of bioactive agent capable of modulating the activity of CAP; (iv) for avaluating the effect of a candidate carcinoma arus; (v) for diagnosing carcinoma; (vi) for inhibiting the activity of CAP; (iv) for relating the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma, (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as markers of
                                                                                                                                                                                                              The present sequence encodes human CAK1 antigen 9.46 (I). Also described is a DNA recombination process used to produce (I). (I) can be used for treating various diseases, such as malignant tumours, inflammations, immunological diseases, haemopathy and HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also.relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, ethods of facteting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may
                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; cytokine; cell proliferation; cell differentiation; growth factor; haematopoiesis regulation; tissue growth; immunomodulator; activin; inhibin; chemotaxis; chemokinesis; thrombolysis; oncogenesis; proliferation; metastasis; cancer; tumour; haematopoietic disorder; myeloid cell disorder; lymphoid cell disorder; asthma; arthritis; chronic inflammatory condition; proliferative retinopathy; atherosclerosis; coronary heart disease; arterial ischaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       bone disorder; osteoporosis; vascular growth disorder;

differentiation activities, including cytokine, cell proliferation or cell
differentiation activities; stem cell growth factor activity;
chaematopolesis regulatory activity; tissue growth activity;
immunomodulatory activity; activin- or inhibin-related activities;
chemotactic or chemokinetic activities; haemostatic, thrombotic or
chemotactic or chemokinetic activities; haemostatic, thrombotic or
thrombolytic activities; receptor or ligand activities; or may be
involved in oncogenesis, cancer cell proliferation or metastasis.

Comparisons, e.g., by protein or gene therapy, such conditions include
conditions e.g., by protein or gene therapy. Such conditions include
conditions, e.g., by protein or gene therapy. Such conditions include
cancers, haematopoietic disorders (e.g., myphoid cell
disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
conditions the cating disorders (e.g., ostboporosis), and abnormal
vaccular growth. Polypeptides involved with tissue regeneration and
repair (or nucleic acids encoding them) may be used to promote wound
healing (e.g., of burns, inclaions and ulcers), while those with
chealing (e.g., of burns, inclaions and ulcers), while those with
challing thungal infections in addition to immune disorders.
Co promote cell growth. For example, such polypeptides may be used to
promote cell growth. For example, such polypeptides may be used to
promote cell growth. For example, such polypeptides and nuclectides
manipulate stem cells in culture to give rise to neuroepithelial cells
chat can be used to augment or replace cells damaged by illness,
cautoimmune disease or accidental damage. The prospections, and in drug
conditions and in the diagnosis of the above conditions, and in drug
conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosing and/or treating cancers and metastasis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, nucleic acid associated protein, NAAP; cancer; atherosclerosis; cell proliferative disorder; neurological disorder; Huntington's disease; epilepsy; stroke; immune disorder; acquired immune deficiency syndrome; AIDS; inflammatory disorder; allergy; developmental disorder; infection; hypothyroidism; cushing's syndrome; gene therapy; cytostatic; noctropic; anticonvulsant; neuroprotective; cerebroprotective; thyromimetic; gene;
protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK676950 and AAM82169 represent sequences used in the exemplification of the present invention

New human nucleic acid associated proteins (NAAP), useful for diagnosing, treating and preventing diseases or conditions associated with the aberrant NAAP expression e.g. cancer, AIDS, atherosclerosis, epilepsy, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; genome mapping; gene therapy; food supplement; virus; fungus; cell-proliferative disorder; neurodegenerative disease, bacterial; parkinson's disease; Alzheimer's disease; autoimmune disease; multiple sclerosis; diabetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunomodulator; nootropic, neuroprocective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide;
                                                                                                                                                                       The present invention relates to human nucleic acid associated proteins (NAAP) and polynucleotides encoding such proteins. NAAP sequences are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of NAAP such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. AIDS, allergies) and developmental (e.g. Hypothyroidism, Cushing's syndrome) disorders or infections. They are also used in gene therapy. The present sequence is human NAAP-4 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotides comprising sequences assembled from expressed acquence tags (ESTS), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or platelet or coagulation disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ren F;

The invention relates to an isolated polymucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-678212119-6782166) or their mature protein coding portion, active domain coding protein or complementary sequences. The polymucleotides are useful for identifying expressed genes or for physical mapping of human genome. The concoded polypeptides (ABS68902-ABP66849) are useful as molecular weight can encoded polypeptides (ABS68902-ABP66849) are useful as molecular weight maying, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays and for treating cellimaging, proliferative disorders, (and disorders, neurodegenerative diseases (Parkinson's corplament's disease), autoimmune diseases (multiple sclerosis, liver corplate for coagulation disorders, wound, burns, incision, ulcers, liver corlung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part corpline apprinted specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated arginine-rich protein-like polynucleotides and polypeptides, useful for diagnosing and/or treating conditions associated with aberrant activity of the arginine-rich polypeptides, such as cancer and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of P53 tumour antigen protein 13. The sequences can be used in the treatment of cancer, haemopathy, HIV infection, immunological diseases and
treatment of diseases or conditions associated with aberrant expression
              or activity of the arginine-rich protein-like polypeptides, such as cancer and inflammation. They can also be used in forensics, gene mapping, identification of mutations responsible for genetic disorders, and in assessing blodiversity. The present sequence represents a novel human arginine-rich protein CDNA.
                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                    P53 tumour antigen protein 13; cancer; haemopathy; HIV infection; immunological disease; inflammation; gene therapy; ss.

The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1615-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABBS7137-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention discloses a composition comprising two or more isolated rat cor human polynucleotides or a polynucleotide which represents a fragment, cerivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound to many an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polypeptides or the compound that confidentifying a cup, spinal segmental nerve injury (Chung), ctrl and spared nerve injury (Shung), chronic constriction of injury (CII) and spared nerve injury (SNU) in an animal confidention which encodes one of the polypeptides of the invention contriction the specification which encodes one of the polypeptides of the invention contriction that the patent did not form part of the printed specification, but was contricted the printed in electronic form directly from WIPO at the sequence data
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                        New composition comprising two or more isolated polypeptides, useful for preparing a medicament for treating pain in an animal.
